INCLUDE YOUR "SHIP TO" ADDRESS INCLUDING ZIP CODE. WE WILL RESPOND WITH APPROPRIATE SHIPPING & HANDLING COSTS. NORMAL METHOD OF SHIPMENT IS BY UPS OR US POSTAL SERVICE.

UK & AUSTRALIA SHIPMENTS

Due to the length of the composite spring assemblies and the length of the shipping boxes (46") required to ship them, all International air shipments will be shipped by United States Postal Service via "Global Express Guaranteed" (GXG). When compared with the commercial carriers such as UPS & DHL etc, this method of shipment is the most efficient and cost effective method available with an estimated delivery time of 1-3 days.

Contact phone numbers, along with full postal address & correct postal code, must be included with your order.

PAYMENT METHODS

1. Pay Pal account doug@mgbmga.com
2. Foreign Draft from your Bank (made payable to British Automotive)

PLEASE NOTE: We no longer accept credit, or debit cards.

PAYMENT FOR GOODS SHOULD BE EITHER BY PAY PAL (MEMBER DOUGLAS JACSKSON doug@mgbmga.com) OR BY MONEY ORDER.

ADJUSTABLE REAR SHACKLE KIT

This kit is available for both the MGA & MGB models fitted with OEM steel springs. This quality kit contains multi-holed shackle links along with polyurethane (95 durometer) bushings that are designed exactly the same as the OEM rubber type. Many other polyurethane bushings that are being sold by other Vendors are generic in design and have a lower durometer reading. Mounting hardware is included with this kit.

PART # RRHASK

P0004144

RRHASK REAR RIDE HEIGHT ADJUSTABLE SHACKLE KIT **\$79.95**

PART # 2A5176/POL

P0004145

2A5176/POL POLYURETHANE SHACKLE BUSHINGS (8) **\$24.95**

The following additional instructions should be read in conjunction with the appropriate section of your workshop manual covering rear spring shackle bushing replacement.

1. Remove all rust and scale from the following:
 - A. Rear road spring eyes.
 - B. Upper shackle bushing body recesses.
2. Insert DRY polyurethane bushings into A & B locations. See NOTE: further on in text.
3. Lubricate inside and ends of the polyurethane bushings with supplied lubricant.
4. Lubricate shackle pins and insert into polyurethane bushing with a twisting motion.
5. Attach shackle links in the desired hole location. The widest distance represents the OEM distance (2.5"). Using any one of the remaining holes will increase your rear ride height by approximately ½" to 1".

NOTE: Reversing the shackle link (2") will lower the ride height approximately ½". Be sure to check for rear spring eye upper contact with body,

6. Snug tighten hardware. Final tightening should be done with the vehicle on the ground.

NOTE: The correct motion of the rear shackle assembly is for the shackle pins to rotate within the polyurethane bushings. By inserting the bushings DRY, we promote this action.
